

EUROWAG: Complete Control Over Spending for Efficient Accounting and Off-Site Operations

Eurowag knows a thing or two about being on the road. One of Europe's leading providers of mobility services for commercial transport, the Prague-based firm has **enjoyed multi-dimensional growth** in recent years. The expansion of its payment and mobility platform and customer base of over 16,000 are dead giveaways of the company's success.

Yet exponential growth comes at a cost if companies' expense management processes aren't ironed out beforehand - a situation Eurowag is now all too familiar with. The company, which today operates in 30 countries across the world, had noticed a lack of visibility and inefficiencies at accounting level. With plenty of off-site business taking place, **miscellaneous travel and expense claims came flying in**. Reconciliation and reimbursement became a grueling and cumbersome task.

Unifying Travel and Expense Data Into a Single Funnel with **SAP® Concur®**

Before: Challenges and Opportunities

- Disparate and non-standardized travel and expense processes at group level
- Accounting team was receiving various types of receipts and inputs from many European countries and Eurowag teams
- Further automation of time- and cost-intensive reporting was key to keep up with the pace of Eurowag's growth

Why SAP

- SAP solution harnesses travel, expense, and vendor invoice management into single cohesive system
- SAP® Concur® offers tremendous scalability potential, meaning the tools can grow as the company does
- A proven solution, SAP Concur also provides mobile tools to help employees get expense reports filed quickly and easily

After: Value-Driven Results

- First-stage implementation in conjunction with a trusted SAP partner was carried out in around six months' time – 60 percent of the workforce already benefits from the solution
- Data is now aligned in a rule-based environment with no need for manual input of ad hoc information
- Standardized company credit cards are directly linked to the system for further automation
- After beginning in the Czech Republic, Eurowag is in the process of rolling out to a further eight countries

EW EUROWAG

"SAP Concur has been **a game-changer for expense management**. Now we are even considering extending the solution to be able to **make bookings of hotels and flights within SAP Concur** too."

THE BEST RUN

Everything **Under One Roof.** Everything **at a Single Glance**

Since Eurowag went live with SAP® Concur®, it is able to analyze – down to the penny – where its travel budget is going. Its accounting team can even negotiate discounts, save taxes, and plan budgets directly within the system.

On top of this implementation, the company is currently replacing its ERP system to increase data harnessing capabilities and has also issued standardized company credit cards to its traveling workforce. These cards are linked to SAP Concur to allow for real-time governance over spending. The interface is also integrated in Eurowag's HR system and the upgraded ERP system. Thanks to its highly flexible system architecture, SAP Concur can adapt to any deployment environment.

Not only does this adoption align Eurowag's expense management process with the scale of its operations, but it also provides a measure of digital transformation to truly set the company up for the future. While the company only enjoys the benefits of the Expense module at present, Head of Finance Processes, Marcella Mathes, explained how Eurowag plans to extend the solution to be able to book accommodation and flights within SAP Concur in the near future.

“Before SAP Concur, someone in accounting would **input all data manually** in the system. Thankfully, this is no longer the case. A standard process has been enforced, and **standardization is a good precondition for automation.**”
